REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art teaches packaging laminates comprising a cardboard substrate and additional extruded layers. The applicants claim a "heat sealable layer of a polyolefin and containing 20-35% of an essential oil scalping reducer comprising an inorganic additive." The "scalping" of a food occurs when the flavors migrate from the food into the packaging. While there have been a number of solutions proposed to prevent the scalping of food flavors, none of the prior art suggested the use of 20-35% of an "an essential oil scalping reducer comprising an inorganic additive. In the simplest form, the inorganic additive can be calcium carbonate; there is no motivation to add 20-35% calcium carbonate in the heat seal layer of the package.

2. The examiner notes that Abandoned Patent Application 2005/00371,162 (having a later filing date Aug 11/2003) teaches the same inventive concept as claimed in the instant application. The examiner carefully reviewed the application and felt information contained therein was cumulative. The references do not provide clear motivation to add 20-35% of an essential oil scalping reducer comprising an inorganic additive" as claimed. As the case is abandoned and not available as prior art, it does not bar patentability of the instant application.

3. The examiner notes that a current review on "Scalping of Flavors in Packaged Food"; this provides insight in the current methods of controlling this phenomenon. It does not suggest the use of inorganic additives for this purpose.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
